Dear Director of Human Resources,

Last week I found the posting on Ormat's website for an EI&C Technician at the Puna Geothermal Venture while researching power generation on the island of Hawaii. The Instrumentation and Control Technology program at Bellingham Technical College has taught me about many of the technologies used in geothermal power generation, as detailed in my resume.

For recent graduates, most opportunities that apply much of our education are in oil & gas industries. I want to use my education and talents in industries that move us toward a brighter future. Geothermal power generation is one of a handful of sustainable methods of power generation where I can apply my education and build experience with a broad range of technologies.

You may reach me by email, or messages left by telephone, between 9AM and 6PM Pacific Time. Your time and consideration are greatly appreciated, and I look forward to any opportunities that come from this application. Thank you.

Sincerely,
Kyle Morris
